snowflake®

DISCRETE MANUFACTURING

WHY SNOWFLAKE FOR SUPPLY CHAIN

KEEP PRODUCTION MOVING. PROTECT EVERY PROMISE.

Connect parts, suppliers and production on Snowflake. Build planning applications that protect customer commitments without buffering every risk with more inventory.

CONTINUITY
Keep critical lines running

SERVICE
Protect delivery commitments

CASH
Target inventory investment

RESPONSE
Compare feasible alternatives

THE INDUSTRY CHALLENGE

ONE MISSING PART. A MISSED PROMISE.

A cheap component can stop an expensive line. When bills of materials, supplier commitments and production plans disagree, teams cannot see which shortage threatens which customer order.

> Connect the part to the promise, then compare feasible responses.

CUSTOMER EXAMPLE

ABB

During the pandemic, ABB's electrification business used Snowflake to avoid unnecessary purchases, reporting about $4.5 million per week in cancelled purchase orders. [4]

Customer-reported historical result, not a forecast.

WHY SNOWFLAKE

ONE PLATFORM. DECISIONS BUILT ON DATA.

Use governed manufacturing data for analysis, planning applications and supplier collaboration.

DECISION & PLANNING APPLICATIONS
Build shortage workbenches and production scenarios that compare service, inventory and cost. [1]

AI & ANALYTICAL INTELLIGENCE
Develop forecasting models with Snowflake ML; use Cortex AI to explore records and supporting documents. [2]

GOVERNED DATA & COLLABORATION
Connect plant and supplier data. Share selected, read-only datasets with authorised partners. [3]

Supplier coverage depends on contributed data and mappings. Review model outputs; integrate approved actions into operational systems.

APPLICATIONS YOU CAN BUILD ON SNOWFLAKE

SEE THE SHORTAGE. CHOOSE THE RESPONSE.

PRIORITISE SHORTAGES
Rank component shortages by production and customer impact, not purchase price.

DATA
BOMs, supplier sites, stock and customer orders.

MEASURE
Production hours and orders at risk.

TEST ALTERNATIVES
Compare transfers, approved substitutes and expediting before changing production.

DATA
Inventory, inbound supply, qualified alternatives and lead times.

MEASURE
On-time delivery; response cost.

TARGET THE BUFFER
Set inventory policies against uncertainty, component criticality and service needs.

DATA
Demand, lead-time variability and supplier reliability.

MEASURE
Inventory value; material availability.

START WITH ONE DECISION

ONE PRODUCT FAMILY. A CREDIBLE RESPONSE.

Bring one shortage scenario, its bills of materials and open orders. Compare the service and cost of feasible responses, with clear owners and approval rules.
