GROCERY RETAIL

WHY SNOWFLAKE FOR SUPPLY CHAIN

FULLER SHELVES. LESS FOOD WASTED.

Connect store demand, shelf life and inbound supply on Snowflake. Build replenishment and fresh-food decisions that balance availability, waste and margin.

AVAILABILITY
Meet demand on shelf

FRESHNESS
Sell within shelf life

WASTE
Reduce unsold perishables

MARGIN
Protect basket economics

THE INDUSTRY CHALLENGE

TOMORROW'S DELIVERY. TODAY'S SHELF LIFE.

More stock can improve availability and create tomorrow's waste. Daily replenishment needs to see what will sell before expiry, what is actually on the shelf and what will arrive next.

> Make availability and waste one decision, not two competing reports.

CUSTOMER EXAMPLE

Sainsbury's

Sainsbury's chose Snowflake on AWS to connect a multi-brand, multi-channel business, removing data silos and widening access across the company. [4]

Published example of a shared retail data foundation.

WHY SNOWFLAKE

ONE PLATFORM. DECISIONS BUILT ON DATA.

Bring store, depot and supplier information together for connected daily decisions.

DECISION & PLANNING APPLICATIONS
Build replenishment and markdown applications around store-product-day demand, residual shelf life and operating constraints. [1]

AI & ANALYTICAL INTELLIGENCE
Use Snowflake ML for local demand forecasts; Cortex AI helps teams investigate availability and waste exceptions. [2]

GOVERNED DATA & COLLABORATION
Combine store, depot and supplier feeds. Share selected, read-only data with authorised trading partners. [3]

Reliable stock and expiry records are essential. Human review, food-safety rules and operational integrations govern actions.

APPLICATIONS YOU CAN BUILD ON SNOWFLAKE

ORDER WISELY. SELL WHILE FRESH.

REPLENISH FOR SHELF LIFE

Set store-product-day orders within shelf-life, case-pack and delivery constraints.

DATA
Sales, stock, expiry dates and inbound deliveries.

MEASURE
On-shelf availability; waste.

TIME FRESH MARKDOWNS

Compare price reductions with likely sell-through before the safe selling deadline.

DATA
Residual life, sales pace, price and stock.

MEASURE
Recovered margin; waste.

COORDINATE SUPPLIERS

Agree shortage priorities before the next delivery cut-off.

DATA
Orders, supplier fill, depot stock and delivery windows.

MEASURE
Supplier fill; shelf gaps.

START WITH ONE DECISION

ONE FRESH CATEGORY. A BALANCED DECISION.

Choose a fresh category and store cluster. Reconcile sales, stock and expiry data; evaluate replenishment and markdown options against availability, waste and margin together.
