PHARMA

WHY SNOWFLAKE FOR SUPPLY CHAIN

PROTECT PATIENT SUPPLY. KNOW WHAT CAN SHIP.

Connect batch, quality and supply records on Snowflake. Build traceable planning decisions that account for release status, expiry and the requirements of each market.

SUPPLY
Protect patient access

QUALITY
Keep approval in control

TRACEABILITY
Connect batch evidence

RESPONSE
Resolve supply exceptions

THE INDUSTRY CHALLENGE

STOCK ON HAND IS NOT STOCK YOU CAN SHIP.

Quality holds, expiry, destination eligibility and transport conditions must be visible alongside demand before supply teams can make a defensible commitment. A stock balance alone cannot answer the question.

> Plan against usable, approved supply, with the evidence behind every exception.

CUSTOMER EXAMPLE

Pfizer

Pfizer built a Virtual Analytics Workspace with Snowpark where data scientists and business users collaborate on manufacturing efficiency and supply-chain forecasting. [4]

Published example of analytics and cross-functional collaboration.

WHY SNOWFLAKE

ONE PLATFORM. DECISIONS BUILT ON DATA.

Connect manufacturing, quality and supply teams through governed data and traceable decision applications.

DECISION & PLANNING APPLICATIONS
Build supply-risk workbenches with traceable assumptions, scenario comparisons and human approval. [1]

AI & ANALYTICAL INTELLIGENCE
Use Snowflake ML for forecasts; Cortex AI can help retrieve and summarise supporting records for review. [2]

GOVERNED DATA & COLLABORATION
Connect manufacturing, quality and logistics data, with controlled access and selected read-only sharing to partners. [3]

Validate each intended use. Quality owns release and disposition, not AI. Execute through approved integrations.

APPLICATIONS YOU CAN BUILD ON SNOWFLAKE

SEE THE RISK. PRESERVE THE EVIDENCE.

SEE RELEASE RISK

Connect batch status and quality work to orders a delay would affect.

DATA
Batch genealogy, quality events, testing and due dates.

MEASURE
Release lead time; orders at risk.

PLAN USABLE SUPPLY

Compare stock and production options within approved supply and market constraints.

DATA
Released stock, expiry, demand and destination eligibility.

MEASURE
Service; expiry exposure.

COLD-CHAIN EVENTS

Trace temperature exceptions to affected shipments for Quality review and disposition.

DATA
Temperature logs, shipment history and stability limits.

MEASURE
Investigation time; batches affected.

START WITH ONE DECISION

ONE PRODUCT. AN EVIDENCED RESPONSE.

Bring supply and Quality teams together around one product and market. Map usable stock, release dependencies and exception evidence; agree decision rights and validation requirements.
