

SUPPLY CHAIN WITH SNOWFLAKE

Why supply chain is the biggest data problem in every account — and how
Snowflake is the only platform that can solve it.

Make it. Move it. Sell it.

YOUR SYSTEMS One van. You can keep it all in your head.

You sell out every day. So you **scale up**.

YOUR SYSTEMS

Spreadsheet
Stock & routes

Local cafés want to stock you. Flying blind at the shelf.

YOUR SYSTEMS

Spreadsheet

This is what "scaled" looks like

Nobody designed this. It accumulated.

Without Snowflake — Point-to-Point Chaos

200+ custom integrations · days of latency · no single source of truth

Nobody designed this. It accumulated.

The 8-cent chip that shut down \$210 billion of car production

FINANCIAL TIMES · JANUARY 2021

"Ford and GM halt production as global chip shortage grips auto industry"

REUTERS · JANUARY 2021

"Toyota avoids semiconductor shortage that has grounded other automakers"

THE CHIP COST

\$0.08

LOST PRODUCTION

\$210B

Ford · GM · VW · Stellantis

EVERYONE ELSE

2020 — COVID disrupts semiconductor supply. No early warning. No buffer.

2021 — Lines shut down. Ford loses 700,000+ vehicles.

\$210B in lost production.

Same shortage. Different outcome. One company had the data to see it coming. That's the business we're in.

 **TOYOTA**

2011 — Fukushima disrupts Toyota. They build a system tracking components 4–6 tiers deep.

2020 — Toyota detects the shortage 8 weeks early. Builds buffer stock.

Every line keeps running. \$20B+ advantage.

Supply chain controls 50–55 cents of every revenue pound

€4.2T

EMEA SUPPLY CHAIN SPEND ANNUALLY
(GARTNER 2024)

Total SC operating expenditure — materials procurement, manufacturing ops, logistics, warehousing & distribution. SC technology software represents ~€30B of this total.

80%

SC AI PILOTS NEVER REACH PRODUCTION
(GARTNER)

£750M

ANNUAL BENEFIT POTENTIAL (LARGE-CAP)

£25B revenue × 50% SC cost base
McKinsey: 3% AI efficiency improvement
Source: McKinsey Global Institute (2023)

WHY THE TIMING IS RIGHT — RIGHT NOW

- EU Supply Chain Due Diligence Act (CSDDD) — tier-N supplier visibility now a legal requirement
- Tariffs and nearshoring mandates creating urgent new EMEA sourcing data needs
- Post-COVID boards mandating resilience investment — and now measuring it on the balance sheet
- Every CxO has an AI mandate — procurement, operations, finance — none have the data foundation to deliver it

ILLUSTRATIVE P&L — £1.00 REVENUE

Gross revenue	£1.00
Revenue logistics + expedite	(£0.10)
COGS — direct materials	(£0.25)
COGS — non-material SC	(£0.20)
SC-controlled	£0.55

Varies by industry — higher in automotive, lower in software. The CFO conversation works in any sector.

From **18 hours** to detect a problem — to **seconds** to act on it.

STAGE 1

Reporting

What happened? Weekly/monthly views. Data 5 days stale.

STAGE 2

Analytics

Why did it happen? Analysts dig for days. Maybe actionable.

STAGE 3 · WHERE MOST ARE

Predictive

What will happen? Models that work in isolation. 80% don't reach production.

STAGE 4 · WHERE THIS GOES

Autonomous

What should happen next — and do it. One approval. Every system updated.

WHAT ENABLES THE MOVE FROM STAGE 3 → STAGE 4

Gartner: "The path to autonomous SC operations is blocked by data fragmentation — not model quality."

Gartner, Predicts 2025: Supply Chain Technology

- 01** Unified, governed data — the model and the decision on the same platform, with a single version of OTIF, fill rate, safety stock
- 02** Real-time signals blended at source — POS, IoT, weather, market data in the same platform as the forecast models
- 03** Closed-loop execution — one approval triggers ERP, TMS, WMS, and replenishment simultaneously

Five Forces Creating Urgency in Every Account

FORCE 01

Demand Complexity & Volatility

- › Shorter product lifecycles & frequent NPIs
- › Omnichannel complexity — DTC, retail, wholesale
- › Consumers expect faster response to demand signals

ALL INDUSTRIES

FORCE 02

Data Explosion & AI Pressure

- › IoT sensors, RFID, GPS — data volumes 10× in 3 years
- › Boards mandate AI ROI — but ungoverned data blocks it
- › 3,600+ live external datasets available on Marketplace

AI DATA FOUNDATION

FORCE 03

Geopolitical & Climate Risk

- › Tariffs driving nearshoring & supplier diversification
- › Climate events disrupting ports, logistics, agriculture
- › Multi-tier supplier risk invisible to most companies

RISK INTELLIGENCE

FORCE 04

IT Cost Pressure & Consolidation

- › Boards demanding fast positive ROI on IT investments
- › Shift from CapEx licensing to OpEx consumption models
- › 5–6 point solutions → one platform (Snowflake)

CONSOLIDATION PLAY

FORCE 05

M&A & Portfolio Complexity

- › Acquisitions create multi-ERP chaos overnight
- › Divestitures break established SC data flows
- › Snowflake unifies without ripping out existing systems

WHITESPACE TRIGGER

BOTTOM LINE

Every one of these forces points to a data problem that Snowflake solves. Volatility means more data. AI pressure means governed data. Consolidation means unified data. Your customer already has the budget — it's sitting in fragmented IT systems.

One foundation. Every SC signal. Every decision.

CHOOSE YOUR MODELS

Claude · GPT-4 · Llama · Mistral · Snowflake Arctic · Bring your own

Three layers, six buyers, one data problem

EXECUTIVE LAYER — ECONOMIC BUYER + STRATEGIC SPONSOR

CSCO / VP Supply Chain

P&L owner for SC. Accountable for service levels, cost-to-serve, resilience.

Language: resilience, OTIF, margin

CPO / Chief Procurement Officer

Owns supplier relationships and raw material cost. Urgently needs tier-N risk visibility.

Language: supplier risk, spend analytics

CFO (SC angle)

Cares about working capital, inventory carrying cost, cash conversion cycle.

Language: inventory turns, cash, WC

OPERATIONS LAYER — TRANSFORMATIONAL CHAMPION + PROCESS OWNERS (EXAMPLES BELOW; ROLES VARY BY SECTOR)

S&OP Lead / IBP Director

Owns the cross-functional planning transformation — not just the data, the entire process redesign. Their pain: slow data, mistrust, cycle time measured in weeks.

Key: Transformational champion — bring in early

VP Manufacturing / Head of Production

Owns OEE, capacity utilisation, OTIF from factory. Cares about MES/SCADA data quality and shift-level visibility.

Opening Q: "How quickly do you see OEE drop?"

Head of Supply Chain Planning

Owns planning strategy, team KPIs, and the end-to-end planning cycle. Accountable for forecast accuracy, safety stock levels, and S&OP execution. Frustration: can't get a clean, unified demand signal.

Opening Q: "What's your current forecast accuracy?"

DATA & IT LAYER — INTERNAL SNOWFLAKE CHAMPION

CIO / Data & Analytics Lead

Platform consolidator. Drowning in point-to-point integrations. Often already a Snowflake customer — SC hasn't been connected yet. That's the fastest win.

Opening Q: "How many systems does your SC team pull data from to run S&OP?"

Speak their language. Every persona has **one thing** they actually measure.

CSCO / VP Supply Chain

EXEC SPONSOR

Metric they own: OTIF, cost-to-serve, inventory turns

Fear: Another disruption with no early warning

Your message: "Your planning tools are only as good as the data feeding them. We're the reason that data is clean, current, and connected."

S&OP Lead / IBP Director

TRANSFORMATIONAL CHAMPION

Metric they own: Planning cycle time, forecast accuracy, plan adherence

Fear: Cross-functional mistrust; every team has different numbers

Your message: "What if Finance, Supply, and Demand all started from the same number? What would that do to your cycle time?"

CPO / Procurement Director

EXEC BUYER

Metric they own: Supplier risk, raw material cost variance, spend under management

Fear: Blind spots in the supplier network; another \$0.08-chip moment

Your message: "How many tiers deep can you see into your supplier network today? We can make that 4–6 tiers, in near-real-time."

Head of Supply Chain Planning

PROCESS OWNER

Metric they own: Forecast MAPE, planning cycle time, safety stock levels, SLOB inventory

Fear: Being unable to defend plans — every function has different numbers, no single truth

Your message: "What external signals are you pulling into your forecast today? We let you blend POS, weather, and economic signals at scale — and finally get one number Finance and Supply can trust."

0.5–2% of Revenue. Every Year.

Supply chain planning transformation consistently delivers 0.5–2% of revenue as annual benefit — split across four value buckets. Use this frame to size the business case before your customer does.

BUCKET 01

Full-Price Fill Rate

Reduce discount depth and markdown frequency. Better forecast accuracy means more products sold at full price. **1–2% price lift on in-scope products.**

~\$70M
ON \$5B REVENUE

BUCKET 02

Fill Rate & Stockout Reduction

OTIF improvement 5–40%. 10% reduction in logistics fees. Faster time-to-revenue. **Largest single bucket.**

~\$225M
ON \$5B REVENUE

BUCKET 03

Net Working Capital

5–30% reduction in inventory budget. 5–10 day cash cycle improvement. Freed cash compounds. **CFO's favourite.**

~\$13M
ON \$5B REVENUE

BUCKET 04

Cost Reduction

20–30% reduction in expedite logistics. 10–20% E&O cost reduction. IT consolidation savings. **Hard \$ savings.**

~\$105M
ON \$5B REVENUE

SIZING THE SNOWFLAKE DEAL

Total annual benefit on \$5B manufacturer: **~\$413M**. A \$1M Snowflake deal = 0.24% of annual benefit. Deal size should reflect the value you're unlocking — not just the cost to the IT budget.

FORRESTER TEI (2024) — SNOWFLAKE SC DEPLOYMENTS

354% ROI over 3 years. Average payback period under 6 months. \$17.4M 3-year NPV (composite org). Your LOB justification for the CFO to approve before IT completes evaluation.

THE VERTICALS · ~\$5.9B EMEA SAM

Four industries. Same play. Different vocabulary.

SAM = Serviceable Addressable Market. Source: Snowflake EMEA SC GTM FY27 strategy. Combined Data Platform + Take-Out SaaS addressable universe per vertical.

DISCRETE MANUFACTURING

~\$2.2B

Auto · A&D · Industrial · Electronics

Most fragmented SC data stack of any industry. BOM complexity, OTIF contractual penalties, ERP+MES+PLM+SCADA silos.

Why we win: tier-2/3 supplier visibility — nobody else does this at scale

RETAIL

~\$1.3B

Grocery · Fashion · DIY · Specialty

DC-level planning misses store-level stockouts. Markdown too late. Perishable OTIF failures. Omnichannel complexity.

Why we win: live POS + weather + foot traffic via Marketplace

CPG

~\$1.5B

F&B · Health & Beauty · Household

NPI with no history, trade promo ROI broken, retailer POS 48–72h stale. Bullwhip effect amplified up the chain.

Why we win: zero-copy POS sharing — live sell-through, no copies, no latency

PHARMA & LIFE SCIENCES

~\$0.9B

Branded · Generic · Biotech · CGT

DSCSA/EU FMD/GxP batch traceability, cold chain IoT, multi-channel demand uncertainty. Recall in hours, not days.

Why we win: the regulation IS the business case — DSCSA & EU FMD built on Snowflake

Full industry deep dives + sub-verticals in reference deck →

The SC SaaS displacement play.

HOW THE ECONOMICS WORK — ILLUSTRATIVE EXAMPLE

● **Current state — large CPG company (illustrative)**

Demand planning SaaS (e.g. Anaplan)	~\$3.5M / yr
SI services to build & maintain models (e.g. Accenture)	~\$5.0M / yr

Total annual running cost ~\$8.5M / yr

- ▶ 18–24 month implementation to go live
- ▶ Data trapped in vendor's proprietary model
- ▶ No connection to retailer POS, IoT or Marketplace signals

▼ **SNOWFLAKE DISPLACEMENT** ▼

● **With Snowflake — illustrative investment**

Engineered solution	~\$250k
FDE	~\$250k

Subtotal before consumption ~\$500k

Snowflake consumption (assumed) ~\$500k

Total including assumed consumption ~\$1M

Representative proposition; solution scope and delivery to be agreed.
Consumption depends on workload and period; not a fixed quote.

Illustrative first-year saving: ~\$7.5M (~88%). Assumes \$500k consumption over 12 months and \$500k solution + FDE in year one; excludes other transition or ongoing costs.

\$1M

illustrative total investment
\$500k solution + FDE + \$500k assumed consumption

TAKE-OUT SAAS TAM — EMEA

\$5.7–6.5B

▶ Discrete Manufacturing	\$1.7–2.0B
▶ CPG	\$1.1–1.4B
▶ Retail	\$1.0–1.2B
▶ Life Sciences	\$0.6–0.9B

Source: Snowflake FY27 EMEA SC GTM Strategy

HOW TO SPOT THE OPPORTUNITY

1. **SAP APO end-of-life** — active migration wave across EMEA. Customers need a new architecture before 2027.
2. **Anaplan / Kinaxis / o9 renewal** — contract coming up in the next 12 months. Ask the question early.
3. **Stalled SI programme** — model was built, nobody trusts the output. Classic Snowflake entry.

"When does your demand planning contract renew — and are you happy with what you're getting from it?"

How Supply Chain Workloads Drive Snowflake Consumption

Data Ingestion & Storage

HIGH VOLUME

Snowpipe + Dynamic Tables stream ERP, WMS, POS, and IoT data continuously. SC data is large, high-frequency, and multi-source. Storage + continuous compute = significant baseline consumption.

Snowpipe

Dynamic Tables

Storage

Cortex AI — Forecasting & ML

HIGH VALUE

Demand forecasting models retrain on every new signal. Anomaly detection runs over IoT/SCADA streams. Supplier risk scoring at scale. Each model training and inference cycle = compute credits.

Cortex ML

AI Functions

Forecasting

Cortex Analyst — Self-Service

USER GROWTH

Every SC query that used to take 3 days via IT ticket now runs in 2.4 seconds. S&OP packs on demand. More users asking more questions = more compute. Scales with user adoption.

Cortex Analyst

Compute

Cortex Agents — Closed Loop

AI PREMIUM

Always-on agents monitoring supply exceptions, generating recommendations, executing actions. Each agent run = LLM tokens + compute. The more automation a customer builds, the more it consumes. Autonomous SC is the highest-value Cortex consumption driver.

Cortex Agents

LLM Tokens

Secure Data Sharing

MULTI-PARTY

Supplier collaboration, retailer POS sharing, logistics partner data exchange — all zero-copy. CPG companies with 50 retail partners = 50 new Snowflake touchpoints. Network effects compound.

Data Sharing

Network Expansion

Marketplace — External Signals

ENRICHMENT

3,600+ live datasets. SC use cases consume: weather data (demand sensing), geo data (store-level planning), port/carrier data (supplier risk), commodity pricing (procurement hedging). Each Marketplace subscription = ARR.

Marketplace

3,600+ Datasets

Why SC deals compound: A customer starts with data ingestion, adds forecasting, then self-service analytics, then agents, then shares data with partners. ARR grows with every capability layer added.

Build your SC account brief with CoWork + CoCo

1 CoWork: Research the account

Who is the CSCO? What SC tools do they run? Any recent disruptions or earnings calls about supply chain? What are their biggest operational challenges?

2 CoCo: Generate the SC discovery brief

Feed the research into CoCo: "Generate an SC discovery brief — anticipated CSCO questions, Snowflake angle per topic, demo moments, and objection handling."

3 Tailor the demo & narrative

Use the brief to name their actual ERP and planning tools in the deck. Map their SC pain to a specific Snowflake capability. Each question cluster maps to a demo moment.

4 Prep the team

2-page internal summary: buyer profile, top objection, 30-min agenda, role assignments. Align AE + SC GTM + SE before the meeting.

WHAT YOU GET

SC Discovery Brief

Anticipated CSCO/CPO questions across 6+ topic clusters — each with Snowflake angle, supporting data point, and suggested demo moment.

Internal Prep Summary

Buyer profile, #1 objection, 30-min agenda, role assignments. Shareable in Slack before the call.

Account-Specific Deck

This presentation with their actual ERP, planning tool, and industry pain points named throughout. 20 minutes with CoCo.

#supply-chain

Post the account — I'll build the brief

THE 30-MINUTE SC FIRST MEETING

How to run the room — and what to have ready

MEETING STRUCTURE

0–5

Context setting

Why this account, why now. Open with one account-specific number — their OTIF rate, inventory days, or a recent SC disruption from CoWork.

5–15

Demo — IBP end-to-end showcase

Run the IBP demo: an end-to-end walk of the full SC intelligence story — demand sensing through supply response. Shows breadth in one flow. Follow-up meetings can drill into a specific use case.

15–22 **SC challenge questions**

Invite pushback. Anticipate the questions from your CoCo brief. Have crisp answers ready — especially on Microsoft/SAP co-existence and "how long does this take."

**22–
30**

Gap analysis + next step

What's missing from their current stack? Who owns the decision? Define one clear next step before the room ends — a date, a name, or a question to answer.

PRE-MEETING CHECKLIST

- ✓ Sub-vertical and key SC pain mapped to a specific Snowflake capability
- ✓ IBP demo staged and tested — with their ERP and planning tool names where possible
- ✓ Top 3 anticipated objections with crisp responses ready
- ✓ Named customer proof point — same vertical, specific metric
- ✓ Partner intro ready if supplier risk, S&OP process, or SI scope comes up
- ✓ All demos tested morning-of — nothing fails in the room

"Show the full IBP story end-to-end. Let them see the breadth — then let them tell you which part they want to go deeper on."

What the SC GTM function **does for you** — and how to engage it

WHAT I CAN DO FOR THIS TEAM

Account strategy & narrative

Industry-specific framing, proof points, discovery question prep — before any SC-first conversation. Tell me the account; I'll give you the story.

Partner advice & warm introductions

Advice on which partner fits the opportunity and warm intros to Deloitte, RelationalAI, Spaulding Ridge, Aimpoint and Bluecrux.

Open the door — use my arrival

New SC GTM function = a credible reason to reach out to SC contacts who've gone cold. Let's use the moment to re-engage your accounts.

Content, collateral & demo

First-meeting decks, ICP guides, SDR cheat sheets — and a SC-specific demo narrative for qualified pipeline.

HOW TO ENGAGE — WHAT TO BRING ME

The minimum I need to be useful:

1. Their tech stack — what APS tool, what ERP (shapes the story I tell)
2. The pain you've heard — even one sentence (tells me where to land)
3. What you want out of the next meeting (sets my role)

I add most value at senior level

C-suite and Director — one level below. The problems we solve (OTIF, resilience, cost-to-serve) are **P&L problems**, not IT problems.

SC planners are in execution mode with their current tool — they won't sponsor a platform play. The CSCO or CFO feels the pain and has the budget.
